Q: Stack Overflow crawler I am trying to build a crawler that will go through the tags to get a list of questions that are tagged with those tags. I was wondering if you could point me in the right direction. A: You should be able to pull a list of the questions tagged with a particular tag using the Stack Overflow API Example - You could then build a quick scraper that visits the given URL for each of the questions, and looks to see what tags are associated with each question. I recently came across a post on Reddit in which a couple revealed that their child was diagnosed with autism. While I usually ignore the social media sites, this one really struck a chord with me. It was an extremely well written post, and it was followed by a barrage of comments. So I went back to the post and dug in. It was a very moving story. And it also demonstrated what I think is a surprisingly common reaction. People want to say the magic words, "autism," and "special needs." Even for people with special needs, the search for the magic words is never-ending. I thought, "Wouldn't it be wonderful if there was a list of simple, practical things I could say to someone with autism?" Well, thanks to the talented Mr. Pouncey, it now exists.
